Professional Summary

In college I focused a lot of my time learning about solar technology, large scale econometric modeling, and the economics of energy production and distribution. After graduating from UCSD I moved back to the Bay area to work on a set of start up businesses with my father Richard Ernest Demaray. One is a patent holding company, Demaray LLC, and the other is a project and operations corporation that demonstrates and develops new IP, Antropy Technologies. In collaboration with ARPAE, UCSC Engineering Department, Nasa Ames, and Tango Systems we made great progress on a Sun2Fiber Coupler and are also working on several other thin film focused energy related projects.

Skills

- Large Scale Economic Modeling
- Proficient in Microsoft Office Programs
- Proficient in Google Docs Programs
- Leadership and Team Management
- Public Speaking
- Web Development
- Large Evening Planning
- Grant application and management
